Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/787,594

Applicant(s)

MOLSEN ET AL.

Examiner

HOAN C. NGUYEN

Art Unit

2871

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 May 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 38-84 is/are pending in the application.
- 4a) Of the above claim(s) 38-50, 52, 53, 55-80, 83 and 84 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 51, 54, 81 and 82 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application
- ☐ Other: _____

Art Unit: 2871

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/07/2007 has been entered.

Claims 1-37 are cancelled. Nonelected claims 38-50, 52-53, 55-80, 83 and 84 are withdrawn. Claims 51, 54 and 81-82 are elected.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claim 51 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Kubo et al. (US6295109B1)** and in view of Hasegawa et al. (US5654780) and Eichenlaub (US5428366A).

Kubo et al. teach (Fig. 2-3) a transflective display comprising

- a liquid crystal 5; the liquid crystal disposed between a front substrate 1 and a rear substrate 2;
- a backlight located behind the liquid crystal,
- a partially reflective mirror 3/8 located between the liquid crystal and a rear polarizer 9 for both reflecting ambient light back through the liquid crystal and allowing transmission of light from the backlight through the liquid crystal characterized in that each pixel is provided with a color light filter;
- a front polarizer located 6 in front of the front substrate and a rear polarizer 16 is located behind the rear substrate.

wherein

- the rear substrate 2 is provided with the partially reflective mirror 3/8.

However, **Kubo et al.** fail to disclose

- a liquid crystal divided into a plurality of pixels with addressing means for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display,
- a transflective display with the backlight comprising a plurality of sequentially flashing light sources.

Art Unit: 2871

Hasegawa et al. teach forming addressing means (TFT) for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display (col. 8 lines 14-21)

Eichenlaub teaches (Fig. 4) a LCD display with the backlight comprising a plurality of sequentially flashing light sources for overcoming the image breakup phenomena (col. 8 lines 54-58).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to further modify a transfective display as **Kubo et al.** disclosed with (a) forming pixels with addressing means (TFT) for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display for improving quality display (col. 8 lines 20-21); (b) the backlight comprising a plurality of sequentially flashing light sources for overcoming the image breakup phenomena as taught by Eichenlaub (col. 8 lines 54-58).

2. Claim 51 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Motomura et al. (US6646702B1)** and in view of Hasegawa et al. (US5654780) and Eichenlaub (US5428366A).

Motomura et al. teach (Fig. 2-3) a transfective display comprising

- a liquid crystal 32; the liquid crystal disposed between a front substrate 21 and a rear substrate 22;

Art Unit: 2871

- a backlight 16 located behind the liquid crystal,
- a partially reflective mirror 26 located between the liquid crystal 32 and a rear polarizer 15 for both reflecting ambient light back through the liquid crystal and allowing transmission of light from the backlight through the liquid crystal characterized in that each pixel is provided with a color light filter;
- a front polarizer located 13 in front of the front substrate and a rear polarizer 16 is located behind the rear substrate.

wherein

- the rear substrate 22 is provided with the partially reflective mirror 26.

However, **Motomura et al.** fail to disclose

- a liquid crystal divided into a plurality of pixels with addressing means for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display,
- a transfective display with the backlight comprising a plurality of sequentially flashing light sources.

Hasegawa et al. teach forming addressing means (TFT) for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display (col. 8 lines 14-21)

Art Unit: 2871

Eichenlaub teaches (Fig. 4) a LCD display with the backlight comprising a plurality of sequentially flashing light sources for overcoming the image breakup phenomena (col. 8 lines 54-58).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to further modify a transflective display as **Motomura et al.** disclosed with (a) forming pixels with addressing means (TFT) for addressing each pixel and switching each pixel between different states resulting in different levels of transmission of light through the display for improving quality display (col. 8 lines 20-21); (b) the backlight comprising a plurality of sequentially flashing light sources for overcoming the image breakup phenomena as taught by Eichenlaub (col. 8 lines 54-58).

3. Claims 54 and 81-82 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Kubo et al. (US6295109B1)** and in view of Hasegawa et al. (US5654780) and Eichenlaub (US5428366A), and further in view of Handschy et al. (US5347378A).

Maeda et al. fail to disclose a transflective display, in which LC is formed a Pi cell.

Handschy et al. teach (col. 2 lines 51-58) a nematic liquid crystal "Pi-cell has the ability to switch between colors with a voltage level at a significantly faster rate. The nematic liquid crystal inherently has substantially parallel surface director orientation.

Art Unit: 2871

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to further modify a transfective display as **Kubo et al.** disclosed with a nematic liquid crystal "Pi-cell for switching between colors with a voltage level for providing frame-sequential color displays at fast rate (col. 2 lines 51-58).

4. Claims 54 and 81-82 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Motomura et al. (US6646702B1)** and in view of Hasegawa et al. (US5654780) and Eichenlaub (US5428366A), and further in view of Handschy et al. (US5347378A).

Maeda et al. fail to disclose a transfective display, in which LC is formed a Pi cell.

Handschy et al. teach (col. 2 lines 51-58) a nematic liquid crystal "Pi-cell has the ability to switch between colors with a voltage level at a significantly faster rate. The nematic liquid crystal inherently has substantially parallel surface director orientation.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to further modify a transfective display as **Motomura et al. (US6646702B1)** disclosed with a nematic liquid crystal "Pi-cell for switching between colors with a voltage level for providing frame-sequential color displays at fast rate (col. 2 lines 51-58).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to HOAN C. NGUYEN whose telephone number is (571) 272-2296. The examiner can normally be reached on MONDAY-THURSDAY:8:00AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on (571) 272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
